FRUIT TREES

A general shortage of fruit trees exists at the present time, but the demand is much greater than usual. In view of this it will be our policy to sell conservatively enough to avoid disappointing our customers.

DWARF FRUIT TREES

APPLES, PEARS, PLUMS, CHERRIES and APRICOTS

2 year old, 4-5 feet high.....	\$1.00
3 year old, 4-6 feet high.....	1.50
4 year old, 4-6 feet high.....	2.00
5 year old, 5-8 feet high.....	2.50

Dwarf trees are grown from the same stock as our espaliered trees and have most of their advantages. They require very little space—only one-fourth as much as an ordinary tree—yet they yield an abundance of delicious fruit.

When fully grown, the maximum height of dwarf trees is not over 10 feet, and by proper pruning they can be kept down to six feet. This makes it easy to prune and spray them, and the fruit, which is of true variety, is within reach for easy picking.

A Promise We Must Keep

TO EVERY OFFICER AND MAN defending our country and our way of life, we who stayed at home made a promise.

We promised him a job, when the war is over—an opportunity to earn a comfortable living at useful work. We promised him freedom—the right to speak, to read, to think, to worship as he chooses, so long as that does not interfere with the freedom of others—and a voice in the making of laws by which we shall be governed. And we promised him security—protection of his family and property against all avoidable danger, which includes inflation as well as crime and war.

It is up to us, the people of the United States, to see that these promises are kept.

—*William Feather.*
